Instructions to set up the JABS Case Link Enhancement

The following instructions are available in this document. Click a link to go to directly to that topic.

To Install the Current LaunchinIE Zip File:

1. Unzip the LaunchinIEprod.zip file to C:\. It will create a folder by the same name containing 7 files:
   1.1 launchinIE.dll – the "Launch In IE" dll comes from.
   1.2 Install.bat – commands to register the .dll and add the registry entry.
   1.3 Install32bit.reg – registry entry to add granting security to the URL.
   1.4 Install64bit.reg – registry entry to add granting security to the URL.
   1.5 Uninstall.bat – commands to un-register the .dll and remove the registry entry.
   1.6 Uninstall32bit.reg – registry entry which will be removed.
   1.7 Uninstall64bit.reg – registry entry which will be removed.
2. Double-click Install.bat
3. Click OK to the successful .dll registration message box.
4. Click Yes to the Registry Editor question.
5. Click OK to the Registry Editor success message.
6. Press any key in the command window to close it.

To Uninstall Previous Versions of LaunchinIE:

1. Double-click Uninstall.bat
2. Click OK to the successful .dll un-registration
3. Click Yes to the Registry Editor question
4. Click OK to the Registry Editor success message
5. Delete the C:\LaunchinIETest folder and its contents
6. Press any key in the command window to close it

To set up a PC:

The enhancement uses cookies to determine the URL for the application to load the image. It is necessary, therefore, to perform the setup on the PC while each user is logged on, or copy the cookie from a successful setup to each user's cookies folder and

rename it. The folder is "C:\Documents and Settings\ TheUsersLogonID \Cookies." The cookie should be named TheUsersLogonID@JabsWeb[1]. Txt

1. At the JABS logon page, click on the 'Imaging URL' link you find under the version number on the logon page.
2. Enter the location of the software you'd like to open using the case number link, and save it. For example, I used 'C:\windows\notepad.exe' to test locally.

You should now be able to access the links in JABS. On the 'Summary,' 'Docket,' 'FTAs,' 'Orders,' 'Proceedings,' 'Participants' and 'eTicket' tabs the case number should appear as a link. Click on it.

What that link does is instructs LaunchinIE to launch the URL you entered in Step 2 using the parameter of the case number. If your application does not like this method well, you can create a batch file or an executable that works better and enter that in the URL at Step 2.

Example Visual Basic file for launching your application:

```
'If a civil case, only 2 args are passed; case# and cs type
'If non-civil case, 3 args are passed; case#, LEA, and cs type
'wscript.echo wscript.arguments.count 'should be 3
'wscript.echo wscript.arguments(0) '9 char case
'wscript.echo wscript.arguments(1) '3 char lea
'wscript.echo wscript.arguments(2) '2 char cs type

If wscript.arguments.count = 3 Then
   strCaseType = wscript.arguments(2)
Else
   strCaseType = wscript.arguments(1)
End If

If strCaseType = "CT" Or strCaseType = "CN" Then
   strCaseType = "CR"
Else
   strCaseType = "CI"
End If
strItemID = wscript.arguments(0)

strMergeDoc =
"https://pierce.countys.web.based.imaging.system/FileLookup_Images.cfm?crim_civ_flg=" &
strCaseType & "&cause_num=" & strItemID '81856 see case 5YC003556

Dim ie
Set ie = CreateObject("internetexplorer.application")
ie.Navigate strMergeDoc
ie.Visible=True
```

Example Imaging URL as configured in JABS:

wscript X:\AOC\LaunchIE\ie.vbs

___

To change the JABS Case Link from a previous operating system to Windows 7:

1. Using Regedit, manually delete the registry entry at:
   HKEY_LOCAL_MACHINE\SOFTWARE\RockinFewl
2. Then add a registry key entry to:
   HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\RockinFewl\LaunchinIE\
   Approved.

OR

1. Delete the registry entry at HKEY_LOCAL_MACHINE\SOFTWARE\RockinFewl
   by using the **old uninstall.bat found in the old LaunchinIESetup.zip**.
2. Then use the LaunchinIEprod.zip file, following the instructions above.
